1)Design the following form and create “Stud” table which contains following fields. When user clicks on “Submit” button then student details will be stored in database.

Step 1 : Create Database and Table

Open phpMyAdmin → SQL and run:

```
CREATE DATABASE studentdb;

USE studentdb;

CREATE TABLE Stud (

id INT AUTO_INCREMENT PRIMARY KEY,

title VARCHAR(10),

student_name VARCHAR(100),

father_name VARCHAR(100),

college_name VARCHAR(150),

xth_percent FLOAT,

xiith_percent FLOAT,

qualifying_exam VARCHAR(50),

graduation_percent FLOAT,

course_interested VARCHAR(50),

address TEXT,

city VARCHAR(50),

state VARCHAR(50),

zipcode VARCHAR(10),

tel_no VARCHAR(15),
```

```
mobile VARCHAR(15),
email VARCHAR(100)
);
```

Step 2 : Create File

Create file in **htdocs folder**

student_form.php

Step 3 : Complete PHP + HTML Code

```
<?php
$servername = "localhost";
$username = "root";
$password = "";
$dbname = "studentdb";

$conn = new mysqli($servername,$username,$password,$dbname);

if($conn->connect_error)
{
die("Connection failed: " . $conn->connect_error);
}
```

```
if(isset($_POST['submit']))
{

$title=$_POST['title'];
$student=$_POST['student_name'];
$father=$_POST['father_name'];
$college=$_POST['college_name'];
$xth=$_POST['xth'];
$xiith=$_POST['xiith'];
$exam=$_POST['exam'];
$grad=$_POST['graduation'];
$course=$_POST['course'];
$address=$_POST['address'];
$city=$_POST['city'];
$state=$_POST['state'];
$zip=$_POST['zip'];
$tel=$_POST['tel'];
$mobile=$_POST['mobile'];
$email=$_POST['email'];

$sql="INSERT INTO
Stud(title,student_name,father_name,college_name,xth_percent,xiith_percen
t,qualifying_exam,graduation_percent,course_interested,address,city,state,zip
code,tel_no,mobile,email)
```

```
VALUES('$title','$student','$father','$college','$xth','$xiith','$exam','$grad','$co
urse','$address','$city','$state','$zip','$tel','$mobile','$email')";

if($conn->query($sql)==TRUE)

{

echo "Student Details Submitted Successfully";

}

else

{

echo "Error: ".$conn->error;

}

}

?>

<html>

<head>

<title>Student Enquiry Form</title>

</head>

<body>

<h2 align="center">Student Enquiry Form</h2>
```

```
<form method="post">

Title
<select name="title">
<option>Mr.</option>
<option>Ms.</option>
</select>
<br><br>

Student Name
<input type="text" name="student_name" required>
<br><br>

Father Name
<input type="text" name="father_name">
<br><br>

School/College Name
<input type="text" name="college_name">
<br><br>

Xth Board %
```

```
<input type="text" name="xth">
<br><br>

XIIth Board %
<input type="text" name="xiith">
<br><br>

Qualifying Exam
<select name="exam">
<option>BCA</option>
<option>BSC</option>
<option>BCOM</option>
</select>
<br><br>

Graduation %
<input type="text" name="graduation">
<br><br>

Course Interested
<select name="course">
<option>MCA</option>
<option>MBA</option>
```

```
<option>MSC</option>

</select>

<br><br>

Address

<textarea name="address"></textarea>

<br><br>

City

<input type="text" name="city">

<br><br>

State

<input type="text" name="state">

<br><br>

Zip Code

<input type="text" name="zip">

<br><br>

Tel No

<input type="text" name="tel">

<br><br>
```

```
Mobile

<input type="text" name="mobile">

<br><br>

Email

<input type="email" name="email">

<br><br>

<input type="submit" name="submit" value="Submit">

<input type="reset" value="Reset">

</form>

</body>

</html>
```

Step 4 : Start **Apache** and **MySQL** in XAMPP
Open **phpMyAdmin** → create database and table
Save file in

C:\xampp\htdocs\student_form.php

Step 5 : Fill form → Click **Submit** → Data stored in **Stud table**

o/p :

Student Enquiry Form		
Please Fill In as many details as possible to enable us to assist you as efficiently as possible		
	Title	Mr.
	*Student Name	
	Father's Name	
	School/College Name	
	Xth Board	%
	XIIth Board	%
	*Qualifying Exam Name	B.C.A
	Graduation	%
	Course Interested	M.C.A
	*Address	
	*City/Town	
	*State/Country/province	
	Post/Zip Code	
	*Tel No.	
	Mobile	
	E-mail Address	
Field Marked With * are Mandatory		
Submit Reset		

2)write a program to display data of a Emp_mst table in tabular format

Design form for INSERT/UPDATE/DELETE for emp_mst table. Create separate function for each operation.

1) **Design given form.**

2) **Design table according to form fields.**

3) **Put proper validation for each field.**

4) **Give appropriate name to each control.**

5) **Perform INSERT/UPDATE/DELETE/DISPLAY.**

Table Name : Emp_mst		
Field name	**Data type**	**Constraints**
Empno	Number (int)	Primary Key
Empnm	Text(20)	
Address	Text(20)	
City	Text(15)	
State	Text(15)	
Bdate	Date/Time	
JoinDate	Date/Time	
Salary	Number (double)	
Deptno	Number(int)	

Step 1 : Create Database

```
CREATE DATABASE companydb;

USE companydb;
```

Step 2 : Create Database and Table

```
CREATE TABLE Emp_mst(

Empno INT PRIMARY KEY,

Empnm VARCHAR(20),

Address VARCHAR(20),

City VARCHAR(15),

State VARCHAR(15),

Bdate DATE,

JoinDate DATE,

Salary DOUBLE,

Deptno INT

);
```

Step 3 : Create PHP File (emp_crud.php**)**

```
<?php

$conn = new mysqli("localhost","root","","companydb");

if($conn->connect_error)
{
die("Connection failed");
}

# INSERT FUNCTION
function insertData($conn)
{
$empno=$_POST['empno'];
$name=$_POST['empnm'];
$address=$_POST['address'];
$city=$_POST['city'];
$state=$_POST['state'];
$bdate=$_POST['bdate'];
$joindate=$_POST['joindate'];
$salary=$_POST['salary'];
$dept=$_POST['deptno'];
```

```
$sql="INSERT INTO Emp_mst
VALUES('$empno','$name','$address','$city','$state','$bdate','$joindate','$salar
y','$dept')";

$conn->query($sql);

}

# UPDATE FUNCTION

function updateData($conn)

{

$empno=$_POST['empno'];

$name=$_POST['empnm'];

$address=$_POST['address'];

$city=$_POST['city'];

$state=$_POST['state'];

$bdate=$_POST['bdate'];

$joindate=$_POST['joindate'];

$salary=$_POST['salary'];

$dept=$_POST['deptno'];

$sql="UPDATE Emp_mst SET

Empnm='$name',

Address='$address',
```

```
City='$city',
State='$state',
Bdate='$bdate',
JoinDate='$joindate',
Salary='$salary',
Deptno='$dept'
WHERE Empno='$empno'";

$conn->query($sql);
}

# DELETE FUNCTION
function deleteData($conn)
{
$empno=$_POST['empno'];

$sql="DELETE FROM Emp_mst WHERE Empno='$empno'";

$conn->query($sql);
}

# BUTTON EVENTS
```

```
if(isset($_POST['insert']))
{
insertData($conn);
}

if(isset($_POST['update']))
{
updateData($conn);
}

if(isset($_POST['delete']))
{
deleteData($conn);
}

?>

<html>

<head>
<title>Employee Form</title>
</head>
```

```
<body>

<h2>Employee Master Form</h2>

<form method="post">

Emp No

<input type="number" name="empno" required><br><br>

Employee Name

<input type="text" name="empnm" required><br><br>

Address

<input type="text" name="address"><br><br>

City

<input type="text" name="city"><br><br>

State

<input type="text" name="state"><br><br>

Birth Date

<input type="date" name="bdate"><br><br>
```

```
Join Date

<input type="date" name="joindate"><br><br>

Salary

<input type="number" name="salary"><br><br>

Dept No

<input type="number" name="deptno"><br><br>

<input type="submit" name="insert" value="INSERT">

<input type="submit" name="update" value="UPDATE">

<input type="submit" name="delete" value="DELETE">

</form>

<hr>

<h3>Employee Records</h3>

<table border="1" cellpadding="10">

<tr>
```

```
<th>Empno</th>
<th>Name</th>
<th>Address</th>
<th>City</th>
<th>State</th>
<th>Birth Date</th>
<th>Join Date</th>
<th>Salary</th>
<th>Dept No</th>
</tr>

<?php

$sql="SELECT * FROM Emp_mst";
$result=$conn->query($sql);

while($row=$result->fetch_assoc())
{
echo "<tr>
<td>".$row['Empno']."</td>
<td>".$row['Empnm']."</td>
<td>".$row['Address']."</td>
<td>".$row['City']."</td>
```

```
<td>".$row['State']."</td>

<td>".$row['Bdate']."</td>

<td>".$row['JoinDate']."</td>

<td>".$row['Salary']."</td>

<td>".$row['Deptno']."</td>

</tr>";

}

?>

</table>

</body>

</html>
```

3. Design the given table and prepare login page and insert the appropriate records.

Field Name	Data Type	Constraint
Uname	Text(10)	Primary Key
Upass	Text(10)	

Step 1 : Create Database and Table

```
CREATE DATABASE logindb;

CREATE TABLE users(
Uname VARCHAR(10) PRIMARY KEY,
Upass VARCHAR(10)
);
```

Step 2 : Insert Sample Records

```
INSERT INTO users VALUES('admin','1234');
INSERT INTO users VALUES('user1','abcd');
```

Step 3 : create php file : login.php

```
<?php

$conn = new mysqli("localhost","root","","logindb");

if($conn->connect_error)
{
die("Connection failed");
}

if(isset($_POST['login']))
```

```
{

$username=$_POST['uname'];
$password=$_POST['upass'];

$sql="SELECT * FROM users WHERE Uname='$username' AND
Upass='$password'";

$result=$conn->query($sql);

if($result->num_rows>0)
{
echo "<h3>Login Successful</h3>";
}
else
{
echo "<h3>Invalid Username or Password</h3>";
}

}

?>

<html>
```

```
<head>
<title>User Login</title>
</head>

<body>

<h2 align="center">User Login</h2>

<form method="post">

<table border="1" align="center" cellpadding="10">

<tr>
<td>Enter Username:</td>
<td><input type="text" name="uname" required></td>
</tr>

<tr>
<td>Enter Password:</td>
<td><input type="password" name="upass" required></td>
</tr>
```

```
<tr>
<td colspan="2" align="center">
<input type="submit" name="login" value="Login">
<input type="reset" value="Reset">
</td>
</tr>

</table>

</form>

</body>
</html>
```
